

JDI

Joint Data Integration

The Joint Data Integration (JDI) Joint Test (JT) will address the quality of the common tactical picture (CTP) used by the Joint Task Force (JTF) Commander to support operational-level force employment decisions. The JDI JT will research, define, develop, test, and evaluate joint CTP data management tactics, techniques, and procedures (TTP) for use in standardizing the CTP. The JDI-developed TTP will improve the quality of the CTP developed for the JTF Commander and shared with the JTF Component Commanders and Combatant Commander.
